SUMMARY

Software Engineer with 3 years of professional experience building and maintaining production full-stack applications using React, TypeScript, Node.js, and PostgreSQL. Experienced across frontend and backend development, REST APIs, third-party integrations, transactional workflows, testing, debugging, cloud environments, and deployments. Strong experience working independently, collaborating with stakeholders, and delivering maintainable, production-ready solutions. Daily user of AI-assisted development tools including Claude Code, ChatGPT, and OpenCode.

PROFESSIONAL EXPERIENCE

Farmacia Alto Palermo - Córdoba, Argentina

Full Stack Software Engineer (Freelance) – Pharmacy CRM Project | Oct.24 – Aug.26

[Company Web Site](#)

- Designed and developed a full-stack CRM platform in collaboration with a local pharmacy for chronic patient follow-up and treatment renewal management.
- Worked directly with pharmacy stakeholders to identify operational problems, translate business requirements into product workflows, and iteratively deliver solutions based on real user feedback.
- Built patient management workflows, prescription tracking systems, follow-up boards, operational dashboards, notifications, authentication flows, and REST APIs.
- Owned the complete software lifecycle, including requirements analysis, system design, database modeling, frontend/backend implementation, testing, deployment, and continuous product evolution.
- Performed unit, integration and E2E testing across frontend and backend functionality, validating business workflows, API behavior, authentication flows, and data consistency.
- Containerized the application stack with Docker Compose, orchestrating the PostgreSQL database, Node.js API, and React client for consistent local development environments.
- Implemented JWT authentication, drag-and-drop workflows, dashboard KPIs, reusable UI architecture, and relational database design.
- Leveraged AI-assisted development tools to accelerate implementation, prototyping, debugging, and feature delivery throughout the project lifecycle.
- Deployed production environments using Vercel and Railway while managing environment configuration and application maintenance.
- Designed and implemented a GitHub Actions CI/CD workflow that automatically validates changes pushed to develop and main through unit, integration, and E2E tests, while integrating with Vercel and Railway for automated production deployments from main.

Tech: React, TypeScript, Redux Toolkit, Tailwind CSS, Node.js, Express, PostgreSQL, Sequelize, JWT, Docker, GitHub Actions, CI/CD, Jest, React Testing Library, Supertest, Playwright, Railway, Vercel.

Odaclick / Exomindset - Córdoba, Argentina

Frontend Software Engineer – Universo Tickets Desktop App | May.25 – Apr.26

[Company Web Site](#) • [Store](#)

- Owned the frontend development of a production desktop ticketing system used by physical box office agents as part of an integrated event sales ecosystem.
- Designed and implemented modular UI architecture using React and TypeScript, building reusable components for high-frequency transactional flows.
- Developed complex sales workflows including authentication, ticket selection, cart management, dynamic pricing, filtering, delivery/return flows, and cash register closing.
- Integrated REST APIs using React Query with caching strategies to optimize data synchronization and reduce redundant network requests.
- Created reusable custom hooks and structured scalable service-layer architecture for API communication and frontend maintainability.
- Focused on UI consistency and usability using Material UI within an Electron-based desktop environment.
- Implemented thermal printer integration, generating pixel-perfect PDF tickets and handling hardware communication within the Electron environment.
- Implemented unit tests for frontend components, hooks, and business logic using Vitest and React Testing Library.

- Contributed to a Next.js-based admin dashboard by implementing a new reporting page for print history, including data table rendering and filtering logic.
- Used Docker to maintain consistent local backend development environments.

Tech: React, TypeScript, Electron, React Query, Material UI, Docker, Vitest, React Testing Library, Next.js.

Getback - Santiago, Chile

Full Stack Web Developer | Mar.23 - Oct.23

Company

- Contributed to a multi-tenant SaaS platform based on a microservices architecture, supporting e-commerce returns and exchanges for retailers across Chile and integrations with WooCommerce, VTEX, and WordPress.
- Worked across multiple Node.js services running on AWS Lambda, with APIs exposed through API Gateway and PostgreSQL databases hosted on Amazon RDS.
- Implemented and maintained third-party e-commerce integrations using a Strategy-based architecture, including WooCommerce order retrieval, exchange order creation, product search, and return tracking.
- Developed data normalization layers to transform platform-specific API responses into the platform's internal schema, handling customer information, products, orders, refunds, and product variations.
- Implemented structured application and HTTP logging using Winston and Morgan across multiple backend services, using AWS CloudWatch for production log monitoring and troubleshooting.
- Debugged and resolved production issues involving API integrations, data mapping, product variations, customer validation, and return workflows using API inspection and structured logging.
- Created and executed PostgreSQL data migration scripts and relational datasets to support geographic and warehouse operations.
- Built and maintained React interfaces and multi-step workflows for customer returns and exchanges, as well as administrative dashboards for operations tracking.

Tech: Node.js, Express.js, TypeScript, JavaScript, React, Redux, PostgreSQL, Sequelize, AWS Lambda, API Gateway, RDS, CloudWatch, WooCommerce, VTEX, WordPress, Winston, Morgan.

ADDITIONAL SOFTWARE ENGINEERING EXPERIENCE

Odaclick / Exomindset - Córdoba, Argentina

Game Software Engineer – Rift Zone: Contact | Nov.24 – Apr.25

- Developed mobile authentication, integrations, localization, NFC security, and UI systems.

SuperBytes - Barcelona, Spain

Game Software Engineer – Taitiko | Nov.23 - Sep.24

- Worked on AI behaviors, ML-Agents, networking, REST API communication, and UI systems.

TECHNICAL SKILLS

- **Programming:** TypeScript, JavaScript, C#.
- **Frontend:** React, Next.js, React Query, Redux, HTML, CSS, Material UI, Tailwind CSS, Electron.
- **Backend:** Node.js, Express.js, REST APIs, PostgreSQL, Sequelize, JWT, Database Modeling.
- **Testing:** Vitest, Jest, React Testing Library, Supertest, Playwright, Unit Testing, Integration Testing, E2E Testing.
- **Cloud & Deployment:** AWS Lambda, API Gateway, RDS, CloudWatch, S3, Vercel, Railway.
- **AI-assisted Development:** Claude Code, ChatGPT, OpenCode, LLM API Integration (Groq).
- **Tools & Workflow:** Git, GitHub, GitHub Actions, CI/CD, Docker, Scrum, Postman, pgAdmin 4.

EDUCATION

- Full Stack Web Developer - Henry Bootcamp - 2022 ([Certification](#)).
- Bachelor's Degree in Music Composition – National University of Córdoba – 2018 ([Certification](#)).

LANGUAGES

- English: C1-Advanced ([Certification](#)) | Spanish: Native
